

Our Offer

CuraMate Education brings comprehensive medical training directly to your environment. Benefit from intuitive content creation tools, fully interactive learning workflows, progress tracking, and automated certificate generation. We adapt our platform to your specific requirements via a flexible extension framework and offer you a high degree of configurability. Deploy **CuraMate Education** according to your preferences - securely on-premises or fully managed in the cloud (single or multi-tenant) in your preferred region.

For a personal demonstration, technical or licensing questions and other inquiries, please contact our experts. We are there for you and offer you customized solutions and a smooth integration.

We are an applied research institute and develop software under an ISO-certified quality management system.

Education

Create Interactive Courses for Medical Training

Solution

Our interactive medical-training platform seamlessly integrates with your existing systems.

Content Creation

It facilitates the creation and upload of educational content. Learning assessment is defined on multiple levels and custom certificates are generated on successful course completion.

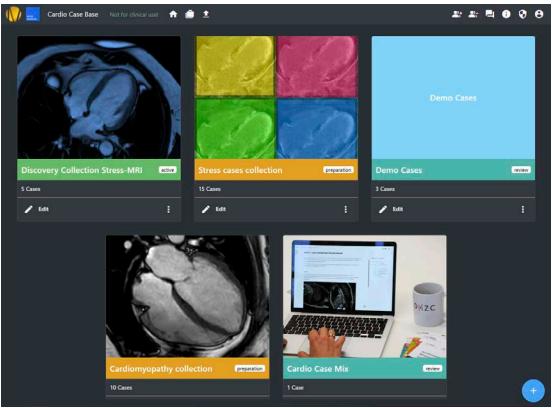

Flexible

Our system can handle various imaging modalities and image formats, and the training content is not limited to specific anatomical regions, clinical questions, or fixed workflows.

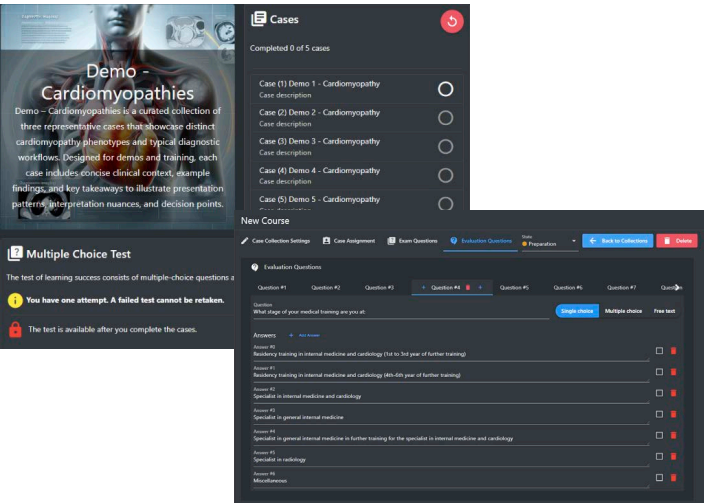

Monitoring

Training providers can check the number of course participants and their progress anytime.

Empower your team with an intuitive toolkit to craft engaging content and streamline the entire learning journey. As an example, CardioCaseBase provided by the DHZB Foundation (www.dhzb-akademie.de) offers multimodal case collections focusing on cardiovascular MRI.

A dashboard presents available courses that administrators can edit and learners can take

Intuitive interfaces make it easy to create courses and for learners to complete them

Benefits

Realistic training environments are essential for continuous education of clinicians. Compared to other platforms, our solution, which simulates a clinical workstation, not only offers static learning content and questionnaires, but also a profound interactive learning experience.

Users navigate through intuitive workflows without the need for manuals, while learning objectives and tasks are clearly presented at every step of case processing.

Did you know?

CuraMate Education builds on our CuraMate toolkit, which streamlines data curation and AI development workflows. This foundation allows us to offer advanced visualization and interaction features, delivering a comprehensive learning experience for educational purposes.

Key Features

Both the efficient creation of teaching material and an effective learning experience are supported by **CuraMate Education** through the following features:

Customizable

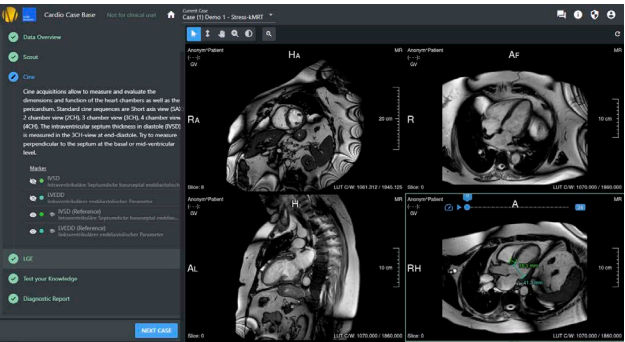

Each course has different requirements, which usually can be met via the simple configuration of our platform. Thanks to its modular implementation and continuous development, advanced customer requirements can be met in a short time.

Realistic Environment

Users experience an interactive environment which offers similar functionality and tools as clinical workstations for image viewing, measurements, and segmentation of anatomical or pathological structures. This elevates education and training by immersing learners in authentic clinical scenarios, enhancing skill retention and confidence before they transition to real-world practice.

Easy Access

Thanks to modern web technologies, users can access the platform via their browser anytime, anywhere. The setup in a commercial cloud ensures reliable operation and scalability.

CuraMate Education provides guided learning workflows in an authentic learning environment
